Objective	<i>Secure a position as software engineer for your company</i>	
EDUCATION	Central Washington University , Ellensburg	
	Bachelor of Science, Computer Science	Expected Spring 2022
	Bachelor of Science, Applied Mathematics	Expected Spring 2022
TECHNICAL SKILLS	Languages : Java, C++, Python, Javascript, CSS, HTML, Python. Database : MySQL, PostgreSQL, MongoDB, Firebase. Relevant Experience with: NodeJS, React, Bootstrap, SASS, Webscraping, Postman, Linear Regression, Logistic Regression, Random Forests, K-Nearest Neighbors. General: Software Engineering, Fullstack Web Development, Data Analytics, Advanced Statistical Methods.	
EXPERIENCE	Technology Intern	July 2021 - Current
	Columbia Basin Health Association As a tech intern, I have played a significant role in the implementation of the KACE asset management system. At the beginning of my internship, I was responsible for physically tagging over two thousand assets with barcodes and putting them in the new asset management system. After this project was complete, I developed a custom web application that allows CBHA to send out information system alerts to its employees via text, and also as a popup alert on employee computers. I am currently building an application that streamlines the process of updating asset information inside of KACE.	
PROJECTS	Professional Project: SMS alert system	Winter 2021
	An application written in Javascript. Allows Columbia Basin Health Association to send out SMS Information System alerts to their employees. This application implements the Twilio SMS API to send text messages to employees when a new alert is created. The User interface of this application was created using HTML, CSS, and Javascript. This UI allows a technician to not only send an SMS to specific groups of employees, but also send an alert to all company devices.	
	Professional Project: Email Response API	Summer 2021
	A NodeJS and Express application which listens for client-side HTTP requests to approve or reject specific approval forms. When the Express server receives a request, it parses the approval data from the request and sends an email through Microsoft exchange on behalf of the end-user. The end result is that the approval form is handled with the single click of a button; making life easier for the user.	
	Personal Project: Portfolio Website	Spring 2022
	A website I created using HTML, SCSS, and Javascript. This website is used to showcase my work and demonstrate my web development skills. In addition to the frontend stack, I also designed an API that will send me an email when somebody fills out and submits a contact form. I implemented the Nodemailer package to achieve this functionality. Check it out here: https://evannordin.dev/
